

# TRAVEL TIME MAPS

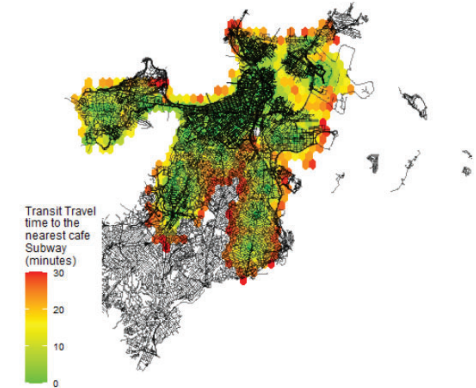

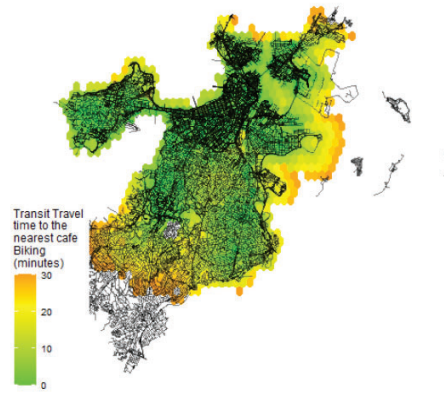

## Walking

The map shows the time it takes to walk to the nearest cafe in Boston from a given location. Most of Downtown, Back Bay, Beacon Hill, Brighton, and Jamaica Plain seem to have good access to cafes, but parts of Roxbury, West Roxbury, East Boston, and Allston don't. However, in the case of Allston and East Boston, this may be misleading if there are nearby cafes in Cambridge or Revere, respectively, that aren't shown on the map.

## Biking

The map shows the time it takes to bike to the nearest cafe in Boston from a given location. It's very similar to the pedestrian walking map from before, but with lower travel times. If nothing else, this map suggests that there are very few rights-of-way in Boston that are passable by bike and not on foot, or vice versa.

## Subway

The above map shows the time it takes to ride the MBTA to the nearest cafe in Boston from a given location. Compared to the first two maps, it makes it clear that parts of Allston, Roxbury, Dorchester, and East Boston have relatively poor access to cafes. It also reiterates the good access to cafes that was evident for the Downtown core neighborhoods in the previous maps.
